REV097 13-NOV-2017

Minggu 00	29 Aug - 05 Sep 2017	Intro & Review
Minggu 01	07 Sep - 12 Sep 2017	IPR, SED, AWK, REGEX, & Scripting
Minggu 02	14 Sep - 19 Sep 2017	Protection, Security, Privacy, & C-language
Minggu 03	26 Sep - 30 Sep 2017	BIOS, Loader, Systemd, & I/O
Minggu 04	03 Okt - 07 Okt 2017	Addressing, Shared Lib, Pointer & I/O Programming
Minggu 05	10 Okt - 14 Okt 2017	Virtual Memory
Ming. UTS	15 Okt - 24 Okt 2017	
Minggu 06	26 Okt - 31 Okt 2017	Concurrency: Processes & Threads
Minggu 07	02 Nov - 07 Nov 2017	Synchronization
Minggu 08	09 Nov - 14 Nov 2017	Scheduling & Network Sockets Programming
Minggu 09	16 Nov - 21 Nov 2017	File System & Persistent Storage
Minggu 10	23 Nov - 28 Nov 2017	Special Topic: Retreat
Cadangan	30 Nov - 09 Des 2017	
Ming. UAS	10 Des - 23 Des 2017	

# Agenda

- 1 Start
- 2 Agenda
- 3 Scheduling
- 4 Threads
- 5 Scheduling Model
- 6 Sockets
- 7 00-server
- 8 01-client
- 9 OUTPUT: 00-server – 01-client
- 10 02-clisvr
- 11 OUTPUT: 02-clisvr
- 12 The End

# Week 08: Scheduling

- Reference: (OSCE2e ch6) (UCB 9/10) (UDA P3L1) (OLD 05) (SUP 08)
- Scheduling
  - Basic Concepts
    - **WARNING:** It's just a BURST
    - IO Burst
    - CPU Burst
    - CPU Burst vs. Freq (OLD)
  - Utilization, throughput, {turnaround, waiting, response} time.
  - (Burst) Algorithm
    - FCFS, SJF, RR, Priority, Multilevel Queue.
  - Preemptive / Non-preemptive Scheduling
  - I/O Bound / CPU Bound Processes
- Standard Linux Scheduling
  - Completely Fair Scheduler (CFS).
  - Real Time Scheduling.

# Thread Scheduling

- Thread Scheduling
  - User-level thread scheduling
  - Kernel-level thread scheduling
- Multi-threading Models:
  - Many to One Model
  - One to One Model
  - Many to Many Model
- Pthread Contention Scope
  - Process-Contention Scope (PCS): many to many (eg. Linux).
  - System-Contention Scope (SCS): one to one.
- MultiCore/ MultiProcessor/ MultiThread
  - affinity
  - load balancing
- Soft / Hard Real Time
- Big O Notation
  - $O(1)$
  - $O(\log N)$
  - $O(N)$

# Scheduling Model

- Two State Model: CPU State – I/O State – CPU State – ...
  - $n$ : processes in memory.
  - $p$ : I/O time fraction.
  - $p^n$ : probability  $n$  processes waiting for I/O.
  - $1 - p^n$ : CPU utilization of  $n$  processes.
  - $\left[ \frac{(1-p^n)}{n} \right]$ : CPU utilization of ONE processes.
- Example:  $p = 60\% \Rightarrow$  **CPU Utilization Per Process:**  $\left[ \frac{1-(60\%)^n}{n} \right]$

CPU Utilization	Multiprogramming (%)				
N	1	2	3	4	5
Per Process	40	36	26	21	18

- For 5 concurrent processes:  
If total time is 100 seconds, each CPU time will be 18 seconds.

- Sockets

- `atoi()`
- `accept()`
- `bind()`
- `connect()`
- `exit()`
- `fprintf()`
- `getenv()`
- `gethostbyname()`
- `htons()`
- `listen()`
- `memcpy()`
- `memset()`

- Sockets

- perror()
- sizeof()
- socket()
- snprintf()
- strchr()
- strcmp()
- strncpy()
- strlen()
- read()
- write()

/*
* (c) 2007 Tadeus Prastowo and Rahmat M. Samik-Ibrahim.
* (c) 2017 Rahmat M. Samik-Ibrahim.
* This is free software. It was copased from the net and hacked until
* it works. Feel free to copy and/or modify and/or distribute it,
* provided this notice, and the copyright notice, are preserved.
* REV01 Wed Nov 8 20:00:02 WIB 2017
* START 2007
*
* This program serves as both a client and a server. Three modes of
* operation are available:
* - initiating mode
* - bridging mode
* - terminating mode
*
* The following are how to run thisprogram for each mode:
* - Initiating mode: client_server null ANOTHER_HOST ANOTHER_PORT
* - Bridging mode: client_server CURRENT_PORT ANOTHER_HOST ANOTHER_PORT
* - Terminating mode: client_server CURRENT_PORT null null
*
* The program having the initiating mode _MUST_ run last after all other
* instances of this program with other operational modes has been started.
*
* In initiating mode, this program just simply sends a hello message to
* another instance of this program that operates either as a bridge or
* as a terminator that this program points to as specified in
* ANOTHER_HOST and ANOTHER_PORT. After that this program will quit
* without printing out any message.
*/
```

## 02-clisvr (2)

```
/*
 * In bridging mode, this program just simply waits for an incoming hello
 * message in CURRENT_PORT. Once it receives a hello message, it prints
 * out the message in a certain format. Next, this program forwards the
 * modified message to another instance of this program that acts either as
 * a bridge or as a terminator that this program points to as specified
 * in ANOTHER_HOST and ANOTHER_PORT. After that this program will quit.
 *
 * In terminating mode, this program just simply waits for an incoming hello
 * message in CURRENT_PORT. Once it receives a hello message, it prints out
 * the message in a certain format, and then quits.
 *
 * The following illustrates the idea above:
 * 192.168.10.18 (alvin)
 * $ ./client_server 8888 localhost 7777
 * 192.168.10.18 (user)$
 * $ ./client_server 7777 null null
 * 192.168.12.17 (eus)$
 * $ ./client_server null 192.168.10.18 8888
 * The print out will be:
 * 192.168.10.18 (alvin):
 *   From eus to alvin: Hello
 * 192.168.10.18 (user):
 *   From eus to alvin to user: Hello
 */
```

## 02-clisvr (3)

```
