CSF2600505 Sistem Operasi

Minggu 07: Synchronization

Rahmat M. Samik-Ibrahim

Universitas Indonesia

<http://rms46.vlsm.org/2/207.html>

REV093 6-NOV-2017

Minggu 00	29 Aug - 05 Sep 2017	Intro & Review
Minggu 01	07 Sep - 12 Sep 2017	IPR, SED, AWK, REGEX, & Scripting
Minggu 02	14 Sep - 19 Sep 2017	Protection, Security, Privacy, & C-language
Minggu 03	26 Sep - 30 Sep 2017	BIOS, Loader, Systemd, & I/O
Minggu 04	03 Okt - 07 Okt 2017	Addressing, Shared Lib, Pointer & I/O Programming
Minggu 05	10 Okt - 14 Okt 2017	Virtual Memory
Ming. UTS	15 Okt - 24 Okt 2017	
Minggu 06	26 Okt - 31 Okt 2017	Concurrency: Processes & Threads
Minggu 07	02 Nov - 07 Nov 2017	Synchronization
Minggu 08	09 Nov - 14 Nov 2017	Scheduling & Network Sockets Programming
Minggu 09	16 Nov - 21 Nov 2017	File System & Persistent Storage
Minggu 10	23 Nov - 28 Nov 2017	Special Topic: Retreat
Cadangan	30 Nov - 09 Des 2017	
Ming. UAS	10 Des - 23 Des 2017	

Agenda I

- 1 Start
- 2 Agenda
- 3 Week 07
- 4 Peterson
- 5 Semaphore
- 6 Deadlock and Starvation
- 7 99-myutils.h
- 8 99-myutils.c
- 9 00-thread
- 10 01-thread
- 11 02-prodkon
- 12 03-readwrite
- 13 04-readwrite
- 14 05-alu
- 15 06-balap
- 16 Rock Paper Scissors Lizard Spock

Agenda II

17 tba

18 The End

Week 07: Synchronization

- Reference: (OSCE2e ch5) (UCB 7/8) (UDA P3L3/4) (OLD 04)
- The Critical Section Problem
- Race Condition
- Peterson's Solution
- Semaphores
- Classical Problems
 - Bounded-Buffer Problem
 - Readers and Writers Problem
 - Dining-Philosophers Problem
- Resource and Allocation Graph

Figure: Request and Holding

Peterson's Solution

Process 0

flag[0]=

turn=

```
do {  
    flag[0] = true  
    turn = 1  
    while (flag[1] && turn == 1)  
        (do nothing);  
    [CRITICAL SECTION];  
    flag[0] = false  
    [REMAINDER SECTION];  
} while(true);
```

Process 1

flag[1]=

```
do {  
    flag[1] = true  
    turn = 0  
    while (flag[0] && turn == 0)  
        (do nothing);  
    [CRITICAL SECTION];  
    flag[1] = false  
    [REMAINDER SECTION];  
} while(true);
```

Semaphore

- Dijkstra's Seinpalen (1963): Probeer (Try) en Verhoog (+1)
- Semaphore: Wait(S) and Signal(S)
- Linux System Calls: `sem_init()`, `sem_wait()`, and `sem_post()`

```
# Semaphore (Seinpalen)
```

```
# Wait (Probeer)
```

```
wait(S) {  
    while (S <= 0)  
        ; // busy wait  
    S--;  
}
```

```
# Signal (Verhoog)
```

```
signal(S) {  
    S++;  
}
```

Deadlock and Starvation

- Deadlock Characterization
 - Mutual exclusion
 - Hold and wait
 - No preemption
 - Circular wait
- Banker's Algorithm
- Deadlock Prevention
- Deadlock Avoidance
- How do Operating Systems handle Deadlocks?

IGNORE THE PROBLEM!

Pretending that deadlocks never occur
Just **RESET/REBOOT** it
This is how they **DO IT!**

99-myutils.h

```
/**
