## CSF2600505 Sistem Operasi

### Minggu 06: Concurrency: Processes & Threads

Rahmat M. Samik-Ibrahim

Universitas Indonesia

<http://rms46.vlsm.org/2/207.html>

REV095 7-NOV-2017

Minggu 00	29 Aug - 05 Sep 2017	Intro & Review
Minggu 01	07 Sep - 12 Sep 2017	IPR, SED, AWK, REGEX, & Scripting
Minggu 02	14 Sep - 19 Sep 2017	Protection, Security, Privacy, & C-language
Minggu 03	26 Sep - 30 Sep 2017	BIOS, Loader, Systemd, & I/O
Minggu 04	03 Okt - 07 Okt 2017	Addressing, Shared Lib, Pointer & I/O Programming
Minggu 05	10 Okt - 14 Okt 2017	Virtual Memory
Ming. UTS	15 Okt - 24 Okt 2017	
Minggu 06	26 Okt - 31 Okt 2017	Concurrency: Processes & Threads
Minggu 07	02 Nov - 07 Nov 2017	Synchronization
Minggu 08	09 Nov - 14 Nov 2017	Scheduling & Network Sockets Programming
Minggu 09	16 Nov - 21 Nov 2017	File System & Persistent Storage
Minggu 10	23 Nov - 28 Nov 2017	Special Topic: Retreat
Cadangan	30 Nov - 09 Des 2017	
Ming. UAS	10 Des - 23 Des 2017	

# Agenda I

- 1 Start
- 2 Agenda
- 3 Week 06
- 4 Process Map
- 5 Process State
- 6 Makefile
- 7 00-fork
- 8 01-fork
- 9 02-fork
- 10 03-fork
- 11 01-fork vs 02-fork vs 03-fork
- 12 04-sleeping
- 13 05-fork
- 14 06-fork
- 15 07-fork
- 16 08-fork

# Agenda II

- 17 09-fork
- 18 10-fork
- 19 11-fork
- 20 12-fork
- 21 14-fork
- 22 15-fork
- 23 The End

# Week 06: Processes & Threads

- Reference: (OSCE2e ch3/4) (UCB 02 03) (UDA P2L1/2/3) (OLD 03)
- Process Concept
  - Program (passive)  $\leftrightarrow$  Process (active)
  - Process in Memory: | *Stack*  $\cdots$  *Head* | *Data* | *Text* |
  - Process State: | *running* | *waiting* | *ready* |
  - Process Control Block (PCB)
  - (I/O vs CPU) Bound Processes
- Process Creation
  - PID: Process Identifier (uniq)
  - The Parent Process forms a tree of Children Processes
  - `fork()`, new process system call (clone)
  - `exec1p()`, replaces the clone with a new program.
- Process Termination
  - `wait()`, until the child process is terminated.

(c) 2017 VauLSMorg

Figure: A Process in Memory

# Process State

Figure: A Process State

# More about Process

- Android Systems
  - Dalvik VM Performance Problem: Replaced with ART (Android Runtime).
  - Foreground Processes: with an User Interface (UI) for Videos, Images, Sounds, Texts, etc.
  - Background Processes: with a service with no UI and small memory footprint.
- The Multi-process Synchronization Problem
  - Producer-Consumer (Bounded Buffer)
  - Readers-Writers
  - Dining Philosopher
- Communication
  - Pipes
  - Sockets
  - RPC

- Multicore Programming
- Multithreading Models
- Threading Issues
- Benefits
  - Responsiveness
  - Resource Sharing
  - Economy
  - Scalability
- Concurrency vs. Parallelism
  - Parallelism on a multi-core system.
- Multithreading Models
  - Many to One
  - One to One
  - Many to Many
  - Multilevel Models
- Pthreads

# Makefile

```
