Minggu 06: Concurency: Processes & Threads

Rahmat M. Samik-Ibrahim

Universitas Indonesia

http://rms46.vlsm.org/2/207.html

REV097 13-NOV-2017

| Minggu 00 | 29 Aug - 05 Sep 2017 | Intro & Review |
Minggu 01	07 Sep - 12 Sep 2017	IPR, SED, AWK, REGEX, & Scripting
Minggu 02	14 Sep - 19 Sep 2017	Protection, Security, Privacy,
		& C-language
Minggu 03	26 Sep - 30 Sep 2017	BIOS, Loader, Systemd, & I/O
Minggu 04	03 Okt - 07 Okt 2017	Addressing, Shared Lib, Pointer
		& I/O Programming
Minggu 05	10 Okt - 14 Okt 2017	Virtual Memory
Ming. UTS	15 Okt - 24 Okt 2017	
Minggu 06	26 Okt - 31 Okt 2017	Concurrency: Processes & Threads
Minggu 07	02 Nov - 07 Nov 2017	Synchronization
Minggu 08	09 Nov - 14 Nov 2017	Scheduling
		& Network Sockets Programming
Minggu 09	16 Nov - 21 Nov 2017	File System & Persistent Storage
Minggu 10	23 Nov - 28 Nov 2017	Special Topic: Retreat
Cadangan	30 Nov - 09 Des 2017	
Ming. UAS	10 Des - 23 Des 2017	

Agenda I

Agenda II

Week 06: Processes & Threads

- Reference: (OSCE2e ch3/4) (UCB 02 03) (UDA P2L1/2/3) (OLD 03)
- Process Concept
    - Program (passive) $\leftrightarrow$ Process (active)
    - Process in Memory: | *Stack* $\cdots$ *Head* | *Data* | *Text* |
    - Process State: | *running* | *waiting* | *ready* |
    - Process Control Block (PCB)
    - (I/O vs CPU) Bound Processes
- Process Creation
    - PID: Process Identifier (uniq)
    - The Parent Process forms a tree of Children Processes
    - fork(), new process system call (clone)
    - execlp(), replaces the clone with a new program.
- Process Termination
    - wait(), until the child process is terminated.
Figure: A Process in Memory

Process State

Figure: A Process State

More about Process

- Android Systems
  - Dalvik VM Performance Problem: Replaced with ART (Android Runtime).
  - Foreground Processes: with an User Interface (UI) for Videos, Images, Sounds, Texts, etc.
  - Background Processes: with a service with no UI and small memory footprint.
- The Multi-process Synchronization Problem
  - Producer-Consumer (Bounded Buffer)
  - Readers-Writers
  - Dining Philosopher
- Communication
  - Pipes
  - Sockets
  - RPC

Thread

- Multicore Programming
- Multithreading Models
- Threading Issues
- Benefits
    - Responsiveness
    - Resource Sharing
    - Economy
    - Scalability
- Concurrency vs. Parallelism
    - Parallelism on a multi-core system.
- Multithreading Models
    - Many to One
    - One to One
    - Many to Many
    - Multilevel Models
- Pthreads

Makefile

```
CC=gcc
P00=00-fork
P01=01-fork
...
P14=14-fork
P15=15-fork

EXECS= \
    $(P00) \
    $(P01) \
    ....
    $(P14) \
    $(P15) \

all:  $(EXECS)

$(P00): $(P00).c
    $(CC) $(P00).c -o $(P00)

$(P01): $(P01).c
    $(CC) $(P01).c -o $(P01)

...

$(P14): $(P14).c
    $(CC) $(P14).c -o $(P14)

$(P15): $(P15).c
    $(CC) $(P15).c -o $(P15)

clean:
    rm -f $(EXECS)
```
